

# Nikita Iudenkov

## Python Backend Engineer

📍 Novi Sad, Serbia 📞 +374 95 042102 @ nyudenkov@pm.me

Profiles	<div> <a href="#">nyudenkov</a></div> <div> <a href="#">nyudenkov</a></div>			
Summary	Backend engineer who turns technical problems into solutions. Built systems handling <b>large user bases</b> , created an <b>open-source security tool</b> for Python ecosystem , and migrated <b>terabytes of data</b> without breaking things. Always exploring new tech - from <b>graph databases</b> to building local <b>RAG systems</b> . <b>6+ years</b> building with <b>Python</b> , from <b>crypto trading platforms</b> to <b>social networks</b> .			
Experience	<b>Independent Development</b>		<b>February 2025 - Present</b>	
	Freelance & Open Source Developer			
	 <a href="#">PySentry Github</a>			
	<b>Summary:</b> Following the closure of my former employer company, transitioned to independent development focusing on open source contributions and client projects.			
	Developed <b>PySentry</b> , a Python vulnerability scanner written in <b>Rust</b> , achieving <b>20-40x performance improvement</b> over existing tools like pip-audit. The project gained significant traction with <b>over 20,000 downloads</b> and was <b>featured in PythonBytes podcast</b> . Received positive feedback from industry professionals, including <b>NVIDIA's Tensor-RT TeamLead</b> .			
	Worked on <b>several confidential client projects</b> involving backend development and automation solutions.			
	Currently <b>actively seeking full-time opportunities</b> in backend development.			
	Technology stack: <b>Python, Rust, FastAPI, PostgreSQL, Streamlit, Tauri, Vue.js, pandas, Docker</b>			
	<b>Yollo</b>		<b>March 2024 - January 2025</b>	
	Python Backend Developer			
Development of a social media platform focused on visual content sharing and user engagement. I <b>led the backend development, implementing core features</b> including user profiles, content feeds, interactions, and analytics.				
Designed and implemented a robust <b>media processing pipeline</b> that handled automated <b>conversion of uploaded videos to .mp4 format, compression</b> , and standardization to 1920x1080 resolution, <b>optimizing storage and delivery performance</b> .				
Spearheaded a <b>complex migration project</b> , successfully transferring approximately <b>90,000 users</b> and <b>2TB of content</b> from a legacy system. This involved extensive data validation and restructuring of problematic database schemas to ensure compatibility with the new architecture.				
Integrated <b>Keycloak</b> for unified authorization across multiple company services.				
Technology stack: <b>Python, Docker, Jenkins, Keycloak, AWS S3, FastAPI, PostgreSQL, Redis, RabbitMQ</b>				
Experience	<b>Evve</b>		<b>Sep 2022 - Dec 2023</b>	
	Python Backend Engineer			
	 <a href="https://evve.net">https://evve.net</a>			
	Evve is a platform designed for hosting professional events incorporating the facets of social networking and platform-based streaming. I spearheaded the ground up backend development for the platform, <b>contributed to product decision discussions</b> , and provided guidance to designers concerning privacy matters, including <b>GDPR</b> .			
	Despite initially having limited experience with <b>AWS</b> , I quickly got to grips with it and <b>implemented a chat</b> feature consisting of two <b>microservices</b> ( <b>API</b> and <b>WebSocket</b> ), utilizing <b>AWS Lambda</b> and <b>AWS DynamoDB</b> .			
	During this experience, I extensively worked with the following tech stack: <b>Python, FastAPI, Sanic, Tortoise-ORM, Redis, Celery, PostgreSQL, Socket.IO</b> , and <b>AWS</b> (specifically <b>DynamoDB, SQS, Lambda, IVS, MediaLive, S3</b> , and <b>Serverless Framework</b> for deployment).			
	<b>Skipp</b>		<b>Aug 2021 - Sep 2022</b>	
	Python Backend Developer			
	 <a href="https://skipp.dev">https://skipp.dev</a>			
	Skipp is an HR platform dedicated to the construction of remote teams. I worked on platform backend, spearheaded the shift to a <b>microservice</b> architecture, significantly improving the efficiency and scalability of the system.			
<b>Designed and implemented</b> a notification <b>service</b> .				
Worked on <b>connecting</b> many third-party <b>APIs</b> .				
I was engaged in transitioning from <b>Django</b> to FastAPI through comprehensive refactoring efforts.				
Technological proficiencies: <b>Python, FastAPI, PostgreSQL, RabbitMQ, Celery, Redis, Docker</b> .				
Experience	<b>SwapZilla</b>		<b>Dec 2019 - Aug 2021</b>	
	Python Backend Engineer			
	Developing a trading platform in <b>Python, aiohttp</b> (used <b>Django</b> in one <b>microservice</b> ), <b>PostgreSQL, Redis, RabbitMQ</b> and <b>AWS (S3, Cognito, Lambdas)</b> for people trading cryptocurrencies that gives access to many exchanges and provides useful tools.			
	<b>Optimized</b> the operation of the service for replenishing/withdrawing balances on the platform, which listened to blocks of transactions within blockchain networks. Developed support for <b>Ethereum</b> .			
	I was developing a service that <b>pulled data from exchanges</b> via <b>REST API</b> and <b>websockets</b> .			
	<b>Neurodens Store</b>		<b>Feb 2019 - Dec 2019</b>	
	Junior Full Stack Developer			
	Development of a backend for online store in <b>Python, Django</b> and <b>PostgreSQL</b> . The Saleor open-source e-commerce engine was used as the basis and has been modified a lot in the process. Developed a frontend with <b>AJAX, SCSS</b> and <b>Codyhouse UI framework</b> .			
Projects	<b>Link Kicker</b>		<b>Aug 2021 - Dec 2022</b>	
	 <a href="https://github.com/nyudenkov/link-kicker">https://github.com/nyudenkov/link-kicker</a>			
	Telegram bot written on <b>Python</b> with <b>aioqram</b> that helps people remember to read postponed links (for ex. with some articles)			
	<b>TutSovet</b>		<b>Sep 2019 - Nov 2020</b>	
	Project Manager / Team Lead / Backend Developer			
	I managed development team that consisted of 1 backend, 1 frontend and 1 AI developers, working on TutSovet - a start-up website with event announcements and an application to find someone to go to an event with. We used <b>Python, Django, RabbitMQ, PostgreSQL</b> , and <b>Rust</b> ( <b>actix-web</b> with <b>diesel-orm</b> ) for backend, and <b>React.js</b> and <b>Codyhouse UI framework</b> for building frontend. Unfortunately, our plans were ruined by COVID-19 restrictions.			
	<b>Space Station 13</b>			
	This is an <b>open-source</b> multiplayer game that was built with closed-source engine called BYOND. I made contributions to one of main forks of this game (/tg/station, 1.3k stars on Github, 4k forks, >1k commits every month)			
	<b>Maintained</b> a few Russian-speaking community <b>forks</b> that had <b>more than 25 unique contributors every month</b> . I made main decisions on in-game mechanic suggestions from players, developed protection against multi-accounts usage, optimized already existing solutions. Also hosted own forks.			
	Technologies: <b>BYOND DreamMaker, C language, SQL</b> (we used <b>MariaDB</b> ), <b>javaScript</b> (for GUI inside game), <b>Python</b> (for Discord bots that interact with game servers) and <b>Rust</b> for optimization of work with files and database.			
Skills	<b>Python</b>	<b>FastAPI</b>	<b>aiohttp</b>	<b>Django</b>
	<b>SQL</b>	<b>PostgreSQL</b>	<b>Redis</b>	<b>RabbitMQ</b>
	<b>Rust</b>	<b>AWS</b>	<b>DynamoDB</b>	<b>Docker</b>
Languages	<b>Russian</b> Native	<b>English</b> B2	<b>Serbian</b> A1	
Interests	<b>Drums</b>	<b>Psychology</b>	<b>Philosophy</b>	<b>Photography</b>
	<b>Drones</b>	<b>Foosball</b>	<b>Hiking</b>	<b>Backgammon</b>
Projects	<b>THE DNTGVFKRS</b>		<b>Nov 2022 - Dec 2023</b>	
	Music project			
	 <a href="https://youtu.be/UtcT35pYs-s">https://youtu.be/UtcT35pYs-s</a>			
	My friends and I found a bunch of electronic gadgets and a drum, and started creating things out of it all. I play percussion in the project. Follow the link - our last performance in the city of Gyumri, Armenia.			
Projects	<b>Personal youtube</b>			
	 <a href="https://www.youtube.com/@nyudenkov">https://www.youtube.com/@nyudenkov</a>			
Here I publish my videos shot on a drone.
